Size: 110x24mm(64-110)
Material: Polyurthane
Color: Translucent pink silver onion or colored
Formula:76-85A
Rebound:50-80%
Logo:Printing Customized

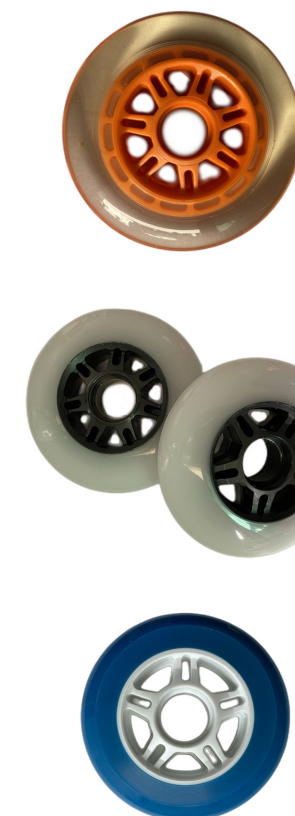

Product introduction

There are different sizes of wheels

The diameter of wheels on the common casual shoes, flat shoes and roller skates ranges from 64mm to 80mm, which is basically four wheels for one shoe (a few children's roller skates have three wheels). Generally, 64-70mm shoes are mostly children's shoes, and 72-80mm shoes are mostly adult shoes.

Soft and hard wheels

The wheel meat on the wheel uses different materials, and its hardness and elasticity are different. It is usually expressed as a number+A on the wheel (such as 76A, 80A, 85A). Soft or hard? This is not absolute! The right is the best.
